**Subject: Saad Trousdale Drive Site
Waste Disposal Activities**

Dear Mr. Stroud:

This letter confirms our previous conversations and written correspondence of October 25, 1991 regarding disposal of materials associated with removal and investigatory activities at the Saad Trousdale Drive Site. Twenty-eight (28) drums of materials remained staged at the site for disposal. These materials have been fully characterized and profiled. The following table identifies the materials and the associated treatment or disposal facilities.

Materials for Disposal	Facility	Comments
• Exposed drum bones/PPE (Profile #SAJ-02)	Laidlaw/ Pinewood SC	Non-hazardous/ landfill
• Empty drums (Profile #SAJ-05)	Laidlaw/ Pinewood SC	Non-hazardous/ landfill
• Oil/water separator sludges (Profile #SAJ-06)	Laidlaw/ Crawley LA	Non-hazardous/ fuels blending
• Drums removed during trenching (Profile #SAJ-05)	Ensco/ El Dorado AR	Hazardous/ incineration
• Water removed during trenching (Profile SAJ-09)	Laidlaw/ Pinewood SC	Hazardous/ stabilization & landfill

Upon disposal of these materials, all wastes associated with the Removal Action/Field investigation (RA/FI) will have been removed from the site for treatment and/or disposal.
